PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience in data validation, structured reporting, and analytics workflows. Strong foundation in Python and SQL, with exposure to large datasets, accuracy-driven processes, and data-backed decision making. Experienced in maintaining data quality, identifying inconsistencies, and supporting reliable reporting for business and technical teams.

EDUCATION

Poornima University

B.Tech in Computer Science

2023 – 2027

Jaipur

Sai Shree International Academy

Senior Secondary (Class XII)

2022 – 2023

Ratlam, MP

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript

Web Technologies: HTML, CSS, React, Tailwind CSS

Data & Analytics: Data Cleaning, Validation, Quality Checks, Descriptive Analysis

Tools: Git, GitHub, MS Excel, Power BI (Basic), Tableau (Basic)

EXPERIENCE

Data Validation Intern – Nokia Project

May 2025

VertexPlus Technologies

Jaipur, India

- Validated and corrected AI-generated telecom field datasets on the Talon AI platform, ensuring compliance with quality standards.
- Performed data cleaning, consistency checks, and standardization across large volumes of records.
- Maintained high accuracy benchmarks aligned with client SLAs and reporting requirements.
- Collaborated with team members to streamline validation workflows and reduce repetitive errors.

PROJECTS

Supply Chain & Inventory Optimization | *SQL, Python (Pandas, NumPy), Power BI, Excel*

- Built an end-to-end inventory optimization solution** by analyzing warehouse-level demand and inventory data to identify overstocking and stockout risks across SKUs.
- Extracted and transformed large transactional datasets using advanced SQL queries (joins, aggregations, CTEs) to compute daily demand, lead times, and inventory levels.
- Implemented demand forecasting and lead-time demand calculations in Python using Pandas and NumPy to estimate future stock requirements.
- Performed inventory turnover and safety stock analysis to classify SKUs into overstocked, optimal, and stockout-risk categories.
- Designed an interactive Power BI dashboard showcasing inventory health KPIs, SKU-level risk alerts, demand trends, and warehouse-wise performance.
- Delivered actionable business recommendations to reduce holding costs and minimize lost sales caused by stockouts and demand-supply mismatch.

Personal Portfolio – Modular Frontend Design | *React, TypeScript, Tailwind CSS*

- Designed and built a production-grade, component-driven frontend** with a strong focus on scalability, maintainability, and performance optimization.
- Architected the application using reusable functional components, clear separation of concerns, and predictable state management patterns.
- Optimized rendering performance by identifying unnecessary re-renders and applying memoization techniques (`useMemo`, `useCallback`).
- Implemented responsive, mobile-first layouts using Tailwind CSS utility classes, ensuring consistent UI behavior across devices.

- Used TypeScript to enforce strict typing, reducing runtime errors and improving developer experience during feature iteration.

Rent Haven – Filtering & Categorization System | *HTML, CSS, JavaScript*

- **Built a client-side filtering and categorization system** to efficiently display and manage structured rental listings.
- Designed filtering logic using multiple attributes (price, location, type), ensuring fast UI updates without page reloads.
- Implemented clean data-to-UI mapping logic to maintain separation between business rules and presentation layers.
- Improved usability by organizing listings into well-defined categories with consistent visual hierarchy.
- Focused on writing readable, modular JavaScript functions to simplify future feature additions and debugging.

Cricket Equipment Website – Structured Content Layout | *HTML, CSS, JavaScript*

- **Developed a structured product information system** emphasizing clarity, hierarchy, and maintainable UI design.
- Classified products into logical categories, enabling intuitive navigation and easy content scaling.
- Designed consistent layouts to present specifications, pricing, and product details in a predictable format.
- Applied clean CSS practices to maintain visual consistency and reduce layout-related bugs.
- Treated UI structure as a data-presentation problem, similar to dashboards used in analytics-driven products.

CERTIFICATIONS

- Python Skill Certification — One Roadmap
- SQL Skill Certification — One Roadmap
- CSS Certification — HackerRank
- Front-End Development — Great Learning
- Intro to Generative AI Studio — Google Cloud
- AI Tools Workshop — Be10x

ACHIEVEMENTS

- Completed multiple Python and SQL challenges on HackerRank with high accuracy.
- Built and version-controlled multiple projects using Git and GitHub.
- Strengthened foundations in DSA, OOP, and DBMS through consistent practice.
